Aloha Board of

Regents,

True leadership can mean making uncomfortable choices. Continuing to invest in fossil fuels is the comfortable choice. And it’s a comfortable choice with severe consequences. Scientific consensus has confirmed the vast negative impacts realized from fossil fuel consumption—most prominent of which is climate change. By continuing to invest in fossil fuel UH is condoning and supporting the economic, environmental, and social destruction that will result with the onset of climate change.

For the sake of moving our world forward in a secure and healthy direction, I urge you to stop investing in destructive technologies. We are a brilliant species, capable of innovation. Make the uncomfortable choice—challenge the status-quo, says yes to innovation and healthy technologies, and live up to your kuleana as leaders. Divest from fossil fuels. Invest in our future.

Warm Regards,

Nicole Chatterson
