

Imaging the Invisible City

Rohan Kalyan
Virginia Tech

This talk shares some of the findings from visual research conducted over the past six years in the city of New Delhi. It uses digital images (both still and moving) to think through contemporary problems and possibilities related to urbanism, democratic politics and economic restructuring in India in general and New Delhi in particular. Finally, it puts forward an argument for creative and critical methodologies for studying the visible and invisible dimensions of postcolonial urban life in the twenty-first century.

FRIDAY, OCTOBER 31ST
SAUNDERS 624, 2:30 – 4:00 P.M.
